

# OpcConditionNodeExtension Members

**Namespace:** Opc.UaFx.Client

**Assemblies:** Opc.UaFx.Advanced.dll, Opc.UaFx.Advanced.dll

The [OpcConditionNodeExtension](#) type exposes the following members.

## Methods

### AddComment(OpcConditionNode, OpcClient, Byte[], OpcText)

Applies a comment to the state reported by an event notification which can be identified by the `eventId` on the `conditionNode` specified using the further specified `client`.

**C#**

```
public static void AddComment(this OpcConditionNode conditionNode, OpcClient client, byte[]  
eventId, OpcText comment)
```

#### Parameters

`conditionNode` [OpcConditionNode](#)

The [OpcConditionNode](#) its 'AddComment' method node is to be called.

`client` [OpcClient](#)

The [OpcClient](#) to use to call the method.

`eventId` [Byte\[\]](#)

The identifier which identifies the particular event notification its reported state for the `conditionNode` is to be commented.

`comment` [OpcText](#)

The text to apply on the condition state.

#### Exceptions

[ArgumentNullException](#)

The `conditionNode`, `client` or `eventId` is a null reference (Nothing in Visual Basic).

[OpcException](#)

The call of the method node failed (see exception details for more information).

# AddComment(OpcConditionNode, OpcClient, OpcText)

Applies a comment to the state reported by an event notification which can be identified by the [EventId](#) of the [conditionNode](#) specified using the further specified [client](#).

## C#

```
public static void AddComment(this OpcConditionNode conditionNode, OpcClient client, OpcText comment)
```

## Parameters

[conditionNode](#) [OpcConditionNode](#)

The [OpcConditionNode](#) its 'AddComment' method node is to be called.

[client](#) [OpcClient](#)

The [OpcClient](#) to use to call the method.

[comment](#) [OpcText](#)

The text to apply on the condition state.

## Exceptions

[ArgumentNullException](#)

The [conditionNode](#) or [client](#) is a null reference (Nothing in Visual Basic).

[OpcException](#)

The call of the method node failed (see exception details for more information).

# Disable(OpcConditionNode, OpcClient)

Changes the condition state to 'Disabled' of the [conditionNode](#) specified using the further specified [client](#).

## C#

```
public static void Disable(this OpcConditionNode conditionNode, OpcClient client)
```

## Parameters

[conditionNode](#) [OpcConditionNode](#)

The [OpcConditionNode](#) its 'Disable' method node is to be called.

[client](#) [OpcClient](#)

The [OpcClient](#) to use to call the method.

## Exceptions

### ArgumentNullException

The `conditionNode` or `client` is a null reference (Nothing in Visual Basic).

### OpcException

The call of the method node failed (see exception details for more information).

## Enable(OpcConditionNode, OpcClient)

Changes the condition state to 'Enabled' of the `conditionNode` specified using the further specified `client`.

### C#

```
public static void Enable(this OpcConditionNode conditionNode, OpcClient client)
```

## Parameters

### conditionNode OpcConditionNode

The `OpcConditionNode` its 'Enable' method node is to be called.

### client OpcClient

The `OpcClient` to use to call the method.

## Exceptions

### ArgumentNullException

The `conditionNode` or `client` is a null reference (Nothing in Visual Basic).

### OpcException

The call of the method node failed (see exception details for more information).
