

OpcFileSetPositionMethodNode.FileSetPositionExCallback Delegate

Namespace: Opc.UaFx

Assemblies: Opc.UaFx.Advanced.dll

SetPosition is used to set the current position of the file handle.

C#

```
[CLSCompliant(false)]
public delegate void FileSetPositionExCallback(OpcMethodContext context,
[OpcArgument("FileHandle", Description = "The file handle associated with the file its position is to be updated.")] uint fileHandle, [OpcArgument("Position", Description = "The new position within the file.")] ulong position);
```

Attributes [CLSCompliantAttribute](#)

Parameters

context [OpcMethodContext](#)

The [OpcMethodContext](#) to use when updating the position in the file. This instance will be also updated with the outcome of the method call.

fileHandle [UInt32](#)

A file handle indicating the access request and thus indirectly the position inside the file.

position [UInt64](#)

The position to be set for the file handle in the file. If a Read or Write is called it starts at that position. If the position is higher than the file size the position is set to the end of the file.

Remarks

This method does provide the following [OpcResult](#) information: * [BadInvalidArgument](#)The file handle specified by **fileHandle** or the [SessionId](#) is not known.
