

OpcMemberLength Class

Namespace: Opc.UaFx

Assemblies: Opc.UaFx.Advanced.dll

Declares the total number of bytes or the number of instances of the type referenced by a member either direct or indirect by referencing a different member its value defines the length of the member.

C#

```
public class OpcMemberLength
```

Inheritance [Object](#) > OpcMemberLength

Constructors

Name	Description
OpcMemberLength(Int64)	Initializes a new instance of the OpcMemberLength class which defines the total number of bytes or the number of instances of the type referenced by a member using the value specified. Using this constructor results in a OpcMemberLength which provides the length direct using the value as the length.
OpcMemberLength(String)	Initializes a new instance of the OpcMemberLength class which refers to the length member using its name specified. Using this constructor results in a OpcMemberLength which provides the length indirect using a different member using its name .

Properties

Name	Description
Name	Gets the name of the length member its value indicates the number of bytes or the number of instances.
Value	Gets the total number of bytes or the number of instances.

Methods

Name	Description
ToString	Returns a String representing the information used by the current OpcMemberLength .
