[Flags]
public enum OpcMemberSwitchConditions
```

Inheritance Object > ValueType > Enum > OpcMemberSwitchConditions

Attributes FlagsAttribute

Fields

Name	Value	Description
Bit	0	The existence of an optional member is controlled by the value of a single bit in the encoding mask (high means the member exists; low the member doesn't exist).
Field	1	The existence of an optional member is controlled by the value of a different member.
Value	2	The existence of an optional member is controlled by the value of a different member which is to be compared to a specific value.
Operator	4	The existence of an optional member is controlled by the value of a different member which is to be compared to a specific value using a specific comparison operator.
