

OpcMethodContext Members

Namespace: Opc.UaFx

Assemblies: Opc.UaFx.Advanced.dll, Opc.UaFx.Advanced.dll

The [OpcMethodContext](#) type exposes the following members.

Properties

Result

Gets or sets the [OpcResult](#) determining the outcome of the callback routine.

C#

```
public OpcResult Result { get; set; }
```

Property Value

[OpcResult](#)

The [OpcResult](#) which contains information about the outcome of the invocation of the callback routine.

Remarks

The value of this property should be changed by the callback routine in cases there the outcome is unequal to [Good](#).

Target

Gets the target [Object](#) to that the method call does belong.

C#

```
public object Target { get; }
```

Property Value

[Object](#)

The [Object](#) which can be a simple [OpcNodeId](#) of the parent node of the method node being called or a reference to the [OpcNode](#) which calls the method. The value of the property can also be of any other type or a null reference (Nothing in Visual Basic).
