

# OpcTaskSchedule Members

**Namespace:** Opc.UaFx

**Assemblies:** Opc.UaFx.Advanced.dll, Opc.UaFx.Advanced.dll

The [OpcTaskSchedule](#) type exposes the following members.

## Properties

### CustomScheduler

Gets or sets the callback used to schedule task invocations.

**C#**

```
public static OpcTaskSchedule.Scheduler CustomScheduler { get; set; }
```

#### Property Value

[Scheduler](#)

A [Scheduler](#) which is used to schedule task invocations, or a null reference (Nothing in Visual Basic) to use a default scheduler. The default value is a null reference (Nothing in Visual Basic).

### DefaultScheduler

**C#**

```
[Obsolete("Use CustomScheduler instead.")]  
public static OpcTaskSchedule.Scheduler DefaultScheduler { get; set; }
```

#### Property Value

[Scheduler](#)

## Methods

### QueryScheduler(SynchronizationContext, out Boolean)

**C#**

```
public static OpcTaskSchedule.Scheduler QueryScheduler(SynchronizationContext context, out  
bool isContextSensitive)
```

#### Parameters

[context](#) [SynchronizationContext](#)

`isContextSensitive` Boolean

## Returns

Scheduler

## Schedule(Action)

Schedules the invocation of the `action` specified using custom queuing and scheduling mechanisms.

### C#

```
public static void Schedule(Action action)
```

## Parameters

`action` Action

The `Action` its invocation is to be scheduled.

## Exceptions

ArgumentNullException

The `action` is a null reference (Nothing in Visual Basic).

## Schedule(Action, SynchronizationContext)

Schedules the invocation of the `action` specified using custom queuing and scheduling mechanisms.

### C#

```
public static void Schedule(Action action, SynchronizationContext context)
```

## Parameters

`action` Action

The `Action` its invocation is to be scheduled.

`context` SynchronizationContext

## Exceptions

## ArgumentNullException

The `action` is a null reference (Nothing in Visual Basic).
