

IECOperandTypes Members

Namespace: IPS7Lnk.Advanced

Assemblies: IPS7LnkNet.Advanced.dll, IPS7LnkNet.Advanced.dll

The [IECOperandTypes](#) type exposes the following members.

Fields

Counter

Specifies the string representation of the counter operand.

C#

```
public const string Counter = "C"
```

Field Value

[String](#)

DataBlock

Specifies the string representation of the data block operand.

C#

```
public const string DataBlock = "DB"
```

Field Value

[String](#)

Flag

Specifies the string representation of the flag operand.

C#

```
public const string Flag = "M"
```

Field Value

[String](#)

Function

Specifies the string representation of the function operand.

C#

```
public const string Function = "FC"
```

Field Value

String

FunctionBlock

Specifies the string representation of the function block operand.

C#

```
public const string FunctionBlock = "FB"
```

Field Value

String

Input

Specifies the string representation of the input operand.

C#

```
public const string Input = "I"
```

Field Value

String

Local

Specifies the string representation of the local operand.

C#

```
public const string Local = "L"
```

Field Value

String

OrganizationBlock

Specifies the string representation of the organization block operand.

C#

```
public const string OrganizationBlock = "OB"
```

Field Value

String

Output

Specifies the string representation of the output operand.

C#

```
public const string Output = "Q"
```

Field Value

String

PeripheryInput

Specifies the string representation of the periphery input operand.

C#

```
public const string PeripheryInput = "PI"
```

Field Value

String

PeripheryOutput

Specifies the string representation of the periphery output operand.

C#

```
public const string PeripheryOutput = "PQ"
```

Field Value

String

SystemFunction

Specifies the string representation of the system function operand.

C#

```
public const string SystemFunction = "SFC"
```

Field Value

String

SystemFunctionBlock

Specifies the string representation of the system function block operand.

C#

```
public const string SystemFunctionBlock = "SFB"
```

Field Value

String

Timer

Specifies the string representation of the timer operand.

C#

```
public const string Timer = "T"
```

Field Value

String

UserDefinedType

Specifies the string representation of the user defined type operand.

C#

```
public const string UserDefinedType = "UDT"
```

Field Value

String

VariableTable

Specifies the string representation of the variable table operand.

C#

```
public const string VariableTable = "VAT"
```

Field Value

String

Table of Contents

Fields	1
Counter	1
DataBlock	1
Flag	1
Function	1
FunctionBlock	2
Input	2
Local	2
OrganizationBlock	2
Output	3
PeripheryInput	3
PeripheryOutput	3
SystemFunction	3
SystemFunctionBlock	4
Timer	4
